## Extending Access to the AMS Journals Online

A core mission of the AMS is the dissemination of peer-reviewed research results. This coming January, the Society makes a significant advance in that mission.

For a number of years, all AMS journal volumes older than five years have been available online free of charge. Effective January 2010, however, users will need to pay for access to just the current year and previous two years worth of content. In other words, any journal volume older than two years will be freely available. This change in policy makes even more current research results available to all without jeopardizing the subscription revenue that is integral to the Society's ability to carry out the stringent peer-review and high-quality publication.

As always, the entire journal database — including accepted manuscripts not yet formally published — is searchable by all, with access restricted to subscribers for the full text [Early Online Release](#) manuscripts and articles from the most recent two years. And, also as always, all the BAMS peer-reviewed articles available through the [Journals Online](#) are open to all immediately on Early Online Release, with the [digital edition](#) of the entire magazine available to all individual members.
