

Shore Page

Directions for Constructing Wave Analyzer Slide Chart Sleeve:

1. On this "Shore Page, " carefully cut out and discard shaded center strip including the Time notch.
2. Cover opening with transparent tape on front and back sides to make a window.
3. Cut out the two notches along right side. Extend cuts to top and bottom of sheet.
4. Fold back and crease paper along the two dashed lines so the top and bottom edges of paper meet or overlap on back side. Lay flat on desk with backside up. Tape the seam formed by the overlap or top and bottom edges to complete slide-chart sleeve.
