The American Meteorological Society  
is pleased to announce the newest title from AMS Books  
**AVAILABLE NOW**

**LEWIS & CLARK:  
WEATHER AND CLIMATE DATA  
FROM THE EXPEDITION JOURNALS**

*Vernon Preston, Ed.*

© 2007, 544 pages hardcover

ISBN 13: 978-1-878220-75-2

List: \$90; Member: \$70

AMS Order Code: LWSCCLARK

**"Lewis and Clark's pioneering weather observations add another small piece to the climate puzzle, serving as an overarching link between early nineteenth-century climate data and our efforts to model climate change today."**

**—Terrence R. Nathan, Atmospheric Science Program  
University of California, Davis**

**"The easy-to-use format makes this a great reference or a great read cover to cover."**

**—Tanja Fransen, Warning Coordination Meteorologist, NWS**

From a bitterly cold winter in South Dakota at the last mapped outpost in a largely unexplored territory, to an 18-mile portage around roaring falls and a race over the Rockies to beat the fall snow, the Lewis and Clark Expedition of 1803–06 experienced a wide range of weather and climate—and systematically recorded their data as they went.

This collection of data from their journals is organized by date and includes descriptions of where the expedition was in their 4,162-mile journey as they experienced the weather and climate. Also included are explanations of their data recording procedures, articles about the importance of this first-of-its-kind meteorological undertaking, and color photographs of the Lewis and Clark Trail.

This volume will serve as a compelling resource for weather, history, and Lewis and Clark buffs alike, as well as for scientists looking back at weather and climate in the early 1800s U.S.
