

AMS 100th Anniversary Campaign

Throughout 2019, AMS will celebrate our 100th anniversary and a Campaign has been established to raise funds needed to launch new initiatives and programs that will continue to expand the diversity of AMS, strengthen and grow the weather, water, and climate community, foster public education, and deepen our impact on science and on society. Looking ahead at the next century, we see a world that faces significant challenges across the atmospheric, oceanic, and hydrologic sciences. Some challenges so extreme, we've never had to solve them before. From shifting ecosystems to basic water resources. From extreme weather events to the greatest climate hurdles since the last ice age. Scientists across the weather, water, and climate communities are being called upon because these are issues the entire world needs to address. The AMS and our community are uniquely qualified to help the world face these challenges. We bring together a vibrant and diverse community of scientists, educators, researchers, students, broadcasters, and other professionals, who share knowledge, improve technology, promote understanding, and disseminate science. AMS is committed to global leadership and scientific integrity to help ensure our planet can thrive.
