Dear Chairman Wicker and Ranking Member Cantwell:

We write to you today to express our profound concern over the Federal Communications Commission’s (“Commission”) flawed Ligado Order that, if left in place, would upend decades of sound spectrum policy, negatively impact a significant cross-section of commercial, federal, and academic users who rely on the many different L-band satellite services, and threaten the safety of most Americans. As you know, L-Band satellite services are “fundamental to the Nation’s economy, national security, and continued technological leadership.” We therefore respectfully request your Committee’s assistance in ensuring that the Commission reconsider its decision to allow a harmful terrestrial network to be built using L-band spectrum.

Operators and users of L-band satellite systems have relied on a stable spectrum environment free from harmful interference to deploy their networks and conduct their operations that depend upon those networks. Ligado’s proposed terrestrial network would fundamentally put the vital L-band satellite communications services—that in some instances serve as the only way to reach even the most remote regions of the world and are critical to safe aviation—at risk. In addition, the proposed Ligado network would disrupt the reliability of satellite communications services and the many critical applications that rely upon Global Positioning System (“GPS”), which has direct implications for safety-of-life in commercial aviation operations, precision farming and irrigation management that have revolutionized the agriculture economy, autonomous ground and air vehicles that will bring a new generation of transportation, precise and actionable weather data that can predict hurricanes and other life-threatening natural events, and many other applications. Simply put, the Ligado Order failed to take full account of the diverse services in the L-band, including those relied on by military, federal, and public safety users, that would be stranded or significantly impaired (without available alternatives) by the harmful interference caused by Ligado’s proposed terrestrial network.

The L-band is heavily and efficiently utilized by the undersigned organizations and companies. Regrettably, the Ligado Order is predicated on an insufficient appreciation for the real-world risks of harmful interference and the impacts that interference would have on our organizations, fourteen federal agencies and departments, and the broad cross-section of the American people we serve. Should Ligado be allowed to deploy its proposed network, our experience and analyses demonstrate that it could result in the degradation of the safety-of-life and the many more satellite services provided over L-band spectrum. These concerns have culminated in the almost unprecedented step of the National Telecommunications

2 Letter from Douglas W. Kinkoph, Deputy Assistant Secretary (Acting), NTIA, to Ajit Pai, Chairman, FCC (Dec. 6, 2019).
and Information Administration ("NTIA") asking the Commission to reconsider its decision based on the detrimental effect Ligado’s proposed new adjacent band terrestrial operations would have.3

We therefore request your direct involvement to protect the satellite communications and GPS services that we provide and are relied on by tens of millions of Americans every day. We urge you to work with the Commission to set aside the flawed Ligado Order in favor of a process that is responsive to the concerns of the incredibly broad cross-section of L-band operators and users representing the aviation, aerospace, agriculture, GPS, ground transportation, mapping, marine, metrological, public safety, satellite communications, and surveying industries and professions. We look forward to continuing our dialogue with you and thank you for your consideration.
