Automated vehicles are a fast growing part of the transportation sector. AVs present a unique set of challenges to operate effectively and safely in varying meteorological conditions. This June, AMS is hosting the Automated Vehicles & Meteorology Summit for a comprehensive discussion on emerging practices, research, and innovation that will help lead to effective long-term solutions and policy making.
What is your organization’s role in this emerging automated vehicle sector? What capabilities do you want to be recognized by scientists, engineers, policy makers, and industry specialists? Partner with AMS as a sponsor for engagement and brand visibility!
